Video and edTPA

Recording Digital Video

Get all consent needed to record

Get a camera that has enough memory and battery life to last your entire lesson

Set it up on a small tripod much more stable

Get the camera as close as possible to where you for better audio

Get as much overhead lighting as possible and decrease glare (some whiteboards) to have better video

Make a test video for 10-30 seconds in your classroom before you have students & adjust according to what you find. Play back on a computer to get better sense of the audio volume.

Camera to Computer

Make whatever physical connection is necessary to get video onto your computer and copy t files; they may be buried in some subfolder on the camera or card

Delete it from your camera once it is copied over

ONLY work with video once it is on your computer

Video Editing

You need to edit or trim your video down to fit the length requirements found in your handbook. V recommend the tools below for video editing. In additional restrictions, no single video file may be larger than 500 MB. Tutorial videos and links can be found here:

http://edtpa.wcu.edu/

Video Editing in Clipchamp

Open Clipchamp and made an account: https://app.clipchamp.com/login

Click on Create a new video

In the top left, click on Import Media and select your recorded lesson

Drag the video down to the timeline at the bottom

Drag the two ends of the video to make the clip only encompass the part of the video you ne to keep for your clip (use the zoom in and out functions on the right to give you more detaile control over the start and end of your clip)

Drag the whole clip back to the left to start at zero

   video to your computer.
